

SYED ABDULLA

Software Engineer | Full-Stack | React · TypeScript · Java · Spring Boot

Bengaluru, India | +91 88676 18049 | syedabdulla761@gmail.com

PROFESSIONAL SUMMARY

Software Engineer with **3+ years** of experience specializing in high-performance React architectures and enterprise data visualization, now full-stack with Spring Boot. Independently owns high-impact features end-to-end — from library migrations and UI unifications to WCAG compliance — while maintaining **zero-spillover** sprint delivery. UVCE CSE '23 (CGPA **9.09**), **Siemens Scholar**.

TECHNICAL SKILLS

Frontend: React.js, JavaScript (ES6+), TypeScript, AG-Grid (Enterprise), Blueprint.js, HTML5, CSS3, WCAG/a11y.

Backend: Java, Spring Boot, Spring Security (ACL), Spring Data JPA, Liquibase, PostgreSQL, JUnit, C# (.NET), REST APIs, Docker.

Infrastructure & Tools: Git, GitHub, GitHub Actions, Bitbucket, Jira, Confluence, Jenkins, SonarCloud, Kubernetes, Agile/Scrum.

AI & productivity: GitHub Copilot Agents, Claude AI, Gemini, AI-assisted Code Reviews.

PROFESSIONAL EXPERIENCE

insightsoftware | Bengaluru, India

Feb 2023 – Present

Product: Logi Composer (Logi Symphony BI Platform) | playground.logi-symphony.com

Software Engineer

Sep 2025 – Present

- AG-Grid Migration (v31 → v35):** Led the enterprise-wide grid library upgrade across **15+ modules** to completion; authored a comprehensive spike document covering **50+ breaking changes**, migration strategy, and a phased **17-ticket** roadmap, then migrated **58 TypeScript files** and **30+ custom cell renderers**, moving to AG-Grid's modular v35 architecture; profiled the build and cut the grid bundle **42% (gzipped)** by registering only the 15 modules in use and enabling cross-chunk dead-code elimination.
- Folder Organization – Backend:** Built the Spring Boot backend for hierarchical Library folders: JPA entities/DAOs, REST APIs and **3 folder-scoped roles** via a custom Spring Security ACL evaluator, advisory-lock name uniqueness and E2E auth tests. Designed **per-user private folders** (~4K LOC): event-driven provisioning, Liquibase backfill, admin preview/execute migration, atomic sharing-driven moves.
- Folder Organization – UI:** Own the React folder experience: Library tree sidebar with breadcrumbs, folder CRUD dialogs with system-folder badges, folder-first navigation and privilege roles.
- SSR Embedding (End-to-End):** Single-handedly delivered Self-Service Report embedding from spike to docs handover, enabling report embedding via Embed Manager with SDK events and embed snippets.
- Symphony Unification & Homepage Revamp:** Spearheaded the homepage redesign into a task-focused interface with theming, consolidating **5+ admin workflows** into a unified experience. Key contributor to the broader product unification initiative.
- Source V2 & Feature Delivery:** Built the Connections tab (tree-structured UI), File tab, and right panel for Source V2. Independently delivered Hierarchical Filter Phase 2 and Auto-Apply Filter Panel with **zero spillovers** across **6+ sprints**.
- Playground AI & Showcases:** Integrated the AI chatbot (visual generation, data Q&A, programmatic Bot API), added pixel-perfect, Crystal Reports and white-labelling showcases, and set up per-branch preview deploys with GitHub Actions.
- WCAG Accessibility:** Resolved a full quarter's a11y tech debt (**35+ fixes**), fixing aria-hidden/tabindex conflicts and implementing screen reader patterns with Blueprint.js FormGroup across dashboards, source editor and menus, improving compliance by **~40%**.
- Cross-Platform Bug Resolution:** Diagnosed and fixed a critical IIS Windows deployment bug (HTTP 404.11) caused by encoded characters in composite URLs, impacting **100%** of Windows-deployed customers.
- Release Maintenance:** **90+ bugs fixed** and **89 backports** across **11 supported releases** since 2023, incl. customer escalations.
- AI-First Workflow:** Shipped 20+ tickets with agentic workflows (Copilot coding agent for implementation, Claude Code for design and review), reviewing **150+ agent commits**.

Associate Software Engineer

Jul 2023 – Aug 2025

- Playground App:** Built the customer-facing Playground tool (React + Spring Boot) from ground up, deployed at playground.logi-symphony.com, now used by **100+** enterprise customers for product exploration.
- Hackathon Win:** Led frontend for a new “Composer” hackathon feature, later approved for the product roadmap.
- Code Quality & Backend:** Drove SonarCloud **High-severity bugs to 0** in the frontend; contributed to Spring Boot API enhancements for enterprise clients.
- Performance:** Resolved a browser crash on line charts rendering **130K+ data points** (stacked-value computation).
- DevOps & Infra:** SonarLint quality gates; fixed Kubernetes/Docker startup and CentOS 7/PostgreSQL 12 deploy issues.

Software Engineering Intern

Feb 2023 – Jun 2023

- Migrated the product's logging library from Raize to Serilog (C#/.NET), improving maintainability.

EDUCATION

B.Tech, Computer Science & Engineering | University Visvesvaraya College of Engineering (UVCE), Bengaluru

2019 – 2023

CGPA: **9.09** | **Siemens Scholar** (Full Scholarship) | 12th: **96.16%** | 10th: **96.48%**

RECOGNITION

Rated **“Exceeds Expectations”** in 2 consecutive reviews (2025, 2026) | Promoted to SE in **2 years** | Manager: “Strong ownership, technical skill, and collaboration.”

Languages: English (Professional) | Hindi (Professional) | Kannada (Native) | Telugu (Conversational)
